Cardiff Royal Infirmary -- Older Persons Mental Health

GP Referral to Adult Social Services

Date: 13 May 2026

Re: Mrs Gwendoline Pritchard, DOB 04/02/1944, 12 Heol Hir, Llanishen, CF14

Dear Social Work Team,

I am writing to refer Mrs Pritchard, an 82-year-old lady with a diagnosis of Alzheimer's disease (moderate stage), who lives alone in Llanishen. She uses a walking frame following two near-falls on her stairs in the past month.

Mrs Pritchard has increasing short-term memory difficulties. She repeats herself, forgets whether she has eaten, and becomes notably disoriented in the evenings. I have concerns about medication adherence, as her dosette boxes are frequently found full at review.

There is a difference of opinion regarding personal care. Her daughter, who lives in Bristol and visits fortnightly, reports that her mother can no longer manage washing and dressing and needs hands-on help each morning. However, during a recent hospital admission the ward nursing record stated she was independent with all personal care. A home assessment to clarify this would be valuable.

Key concerns are falls risk, social isolation and medication management. I would be grateful for a social care needs assessment with a view to a support package and possible assistive technology.

Yours faithfully,

Dr Helen Probert, GP, Llanishen Health Centre
